Ecological Modelling 99 (1997) 297

ECOLOGICAL MODELLING

Contents of *Ecological Modelling*, Vol. 99

VOL. 99 NO. 1 — 16 JUNE 1997

Toxicity may affect predictability of eutrophication models in the coastal sea
T. Legović (Zagreb, Croatia) 1
On some general properties of trophic networks
Y.M. Svirezhev (Potsdam, Germany) 7
A model of phytoplankton growth on multiple nutrients based on the Michaelis–Menten–Monod uptake, Droop's growth and Liebig's law
T. Legović (Zagreb, Croatia) and A. Cruzado (Blanes, Spain) 19
Emergy/exergy ratio as a measure of the level of organization of systems
S. Bastianoni and N. Marchettini (Siena, Italy) 33
Exergy and structural exergy as ecological indicators for the development state of the Lake Chaohu ecosystem
X. Fuliu (Hefei, People's Republic of China) 41
Analysis of nutrient-cycling dynamics, for predicting sustainability and CO_2-response of nutrient-limited forest ecosystems
H.N. Comins (Sydney, NSW, Australia) 51
A case of combined use of crop simulation models and general linear models
V. Trouslard-Kerdiles (Castanet Tolosan, France) and M.O. Grondona (Buenos Aires, Argentina) 71
A model for predicting forest fire spreading using cellular automata

VOL. 99 NOS. 2,3 — 30 JUNE 1997

Simulating effects of S and N deposition on soil water chemistry by the nutrient cycling model NuCM
T.A. Sogn and G. Abrahamsen (Ås, Norway) 101
Individual-based modeling of PCBs effects on young-of-the-year largemouth bass in southeastern USA reservoira
J.S. Jaworska, K.A. Rose and A.L. Brenkert (Oak Ridge, TN, USA) 113
Temporal fire disturbance patterns on a forest landscape
C. Li, M. Ter-Mikaelian and A. Perera (Sault Ste. Marie, Ontario, Canada) 137
A new model for the prediction of rainfall interception in forest canopies
S. Liu (Gainesville, FL, USA) 151
Dynamic linear Bayesian models in phytoplankton ecology
D. Soudant, B. Beliaeff (Nantes, France) and G. Thomas (Paris, France) 161
Frequency distributions and transformations of lake variables, catchment area and morphometric parameters in predictive regression models for small glacial lakes
L. Håkanson and M. Lindström (Uppsala, Sweden) 171
Mature size determination in copepods: The adaptive significance of mature size in copepods: output or efficiency selection?
K. Omori (Matsuyama Ehime, Japan) 203
Wind induced sediment resuspension: a lake-wide model
M.C. Bailey and D.P. Hamilton (Nedlands WA, Australia) 217
Scaling artefacts in confinement experiments: a simulation model
R. Mac Nally (Clayton, Australia) 229
Temporal variation of C and N turnover in soil after oilseed rape straw incorporation in the field: simulations with the soil-plant-atmosphere model DAISY
T. Mueller, L.S. Jensen, J. Magid and N.E. Nielsen (Frederiksberg C (Copenhagen), Denmark) 247
Fixed versus variable-parameter matrix models of forest growth:the case of maple-birch forests
C.-R. Lin and J. Buongiorno (Madison, WI, USA) 263
A root-morphology based simulation for plant/soil microbial ecosystem modelling
T.N. Brown, D. Kulasiri and R.E. Gaunt (, New Zealand) 275
A simple formula for calculating the lower limit of Shannon's diversity index
J.-N. Beisel and J.-C. Moreteau (Metz, France) 289
